DEWATERING TUBE

Dewatering Tubes provides a simple and cost effective solution for inland dewatering problems.

Designed for:

- Dredged Material
- Industrial Sludge Dewatering
- Wastewater Treatment Plants
- Contaminated Soil Containment
- Animal or Organic Waste (Piggeries or Banana plantations)

Dewatering Tubes are made from High-Strength Woven Geotextile which is available as standard sizes tubes or can be made to your requirements. Tubes can be filled via gravity feed or via pumping.

How it works:

Tube positioned to be pumped with sludge

Water filters through pores leaving solids in Tube

Solids left in bag form a large "filter cake" ready to be removed from site

Over all results in less labour, as there is no need to turn sludge over, there-by reducing on-site labor costs
