- SAVES TIME
- SAVES & CONSERVES WATER
- SAVES ON MAINTENANCE COSTS
- SAVES ON TOTAL CONSTRUCTIONS
- WILL IMPROVE THE INTEGRITY OF EXISTING GRANULAR MATERIALS
- ALLOWS THE USE OF MATERIALS PREVIOUSLY CONSIDERED UNSUITABLE

Polycom is an innovative new Dry Powder Polymeric materials compaction binder that dramatically reduces the time required for the construction and maintenance of sealed and unsealed roads.

In the mining industry the product maximizes water efficiency when applied on haul roads creating safer working conditions and reduced operating costs which is a must for every road construction and materials stabilization project.

Polymer pavement stabilization compound delivers three important budget reductions for all road constructions:

Water, Maintenance & Dust Suppression. No extra plant or equipment is required: PolyCom is simply added to the water cart at the time of filling via the patented PolyCom Eductor Unit which mixes the product thoroughly in the desired ratio.

Reduction of water requirement will have the flow-on effect of improving construction cost efficiencies by minimising the water delivery times and frequency and thus optimising the grader and roller productivity. PolyCom will also minimises the effect of wind erosion on stockpiles of road base, sands and soil.

Polycom effectively:

- Reduces the amount of water required
- Create higher efficiency
- Higher productivity
- Costs less than traditional methods
