FILTRATION BAGS

Muddy, sediment-laden water pumped from construction sites into the sediment filter bag results in almost sediment-free water discharges through the walls of the bag. This relatively new technique of sediment control is very useful in meeting the sediment control requirements for well construction sites.

Filtration Bags are double stitched for extra strength with a .5m neck for attachment to a 2" or 4" pump. Eyelets are also sewn onto the corners should you wish to anchor the bags. Manufactured from MRS11.27 Strength Class "D" Non Woven Geotextile (330gsm+).

1.0m x 2.0m Filtration Bag	MRS11.27 Strength Class "D" Non Woven Geotextile
2.0m x 2.0m Filtration Bag	MRS11.27 Strength Class "D" Non Woven Geotextile

Can be made to customer requirements
